#### Applications

Letterhead, business correspondence.  
Utilisation

Inkjet printer: printing quality guaranteed up to 120 gsm.

Laser printer: printing quality guaranteed from 80 to 160 gsm.

Other elements : offset, letterpress, silk screen, thermography, foil blocking, die stamping, embossing, varnishing...

#### Printing recommendation

Screen ruling : 133 lpi

It is recommended to use conventional, positive-drying inks or fully oxidizing inks. The utilisation of UV inks is possible, but overnight / stay fresh / duct-stable inks should be avoided. It should be used an anti-set-off powder. Allow sufficient drying time. Infra red drying assistance is possible. For better results on textured papers the blanket pressure should be increased or a softer blanket should be used to achieve consistent ink lay down. In case of following laser printing the use of specific ink is advisable.

#### Varnishing

The use of a compatible pre-sealer is strongly recommended before applying a gloss UV varnish. Paper weights under 160 gsm should not be varnished.

#### Folding

Pre-creasing or scoring is required for 160 gsm and up.

#### Folding

Pre-creasing or scoring is required for 160 gsm and up.

#### Packaging and storage

Store the wrapped paper in the printing machine room until it has adapted to the room temperature.

Only remove the wrapping paper shortly before printing.

Cover paper after the printing process has been finished.
